

# **PASSION**

## **PROJECT(POV)**

How might we create an application or website for students to socialize?

How might we collect the data to see how many students will use the application ?

How might we let students know about our application ?

How might we make the application available to students ?

How might we make this application fun to use ?

How might we help them find other students with the same hobbies ?

How might we create a criteria for two students to match ?

**User** : Students living in Eindhoven

**Needs** : To socialize with other students at Fontys outside school hours

**Insight** : Students that find it hard to socialize can find other students with similar hobbies on an application or website that allows them to do so with people within the same school(Fontys)
